

COMPLIANCE CASE SUMMARY

Trade Surveillance & Alert Triage Engine | Generated 2026-06-06 19:03:36 UTC

Alert Details

Alert ID	TRD-20260607-LAY-0003
Pattern	LAYERING
Trader	T-4821
Instrument	AAPL
Severity	HIGH
Anomaly	+10.0σ vs 30-day baseline
Detected At	2026-06-06 19:02:16 UTC

AI Triage Verdict (Claude)

Verdict	ESCALATE
Confidence	91%
False Positive Probability	6%
API Call Cost	mock / cached

Rationale

The cancel ratio of 85.7% with median time-to-cancel of 621ms is far outside this prop_desk trader's 30-day baseline (+10.0 sigma). The simultaneous SELL execution at +0.4% confirms classic layering mechanics: artificial BUY pressure created and immediately removed once the SELL executed at the elevated price.

Key Factors

- cancel_ratio 85.7% vs baseline 25% (+10sigma)
- median TTC 621ms — well below 2s spoofing threshold
- opposite-side SELL filled at +0.4% premium during cancel window
- prop_desk account with no registered market-maker exemption

Recommended Action

Escalate to L2 surveillance immediately; suspend trading for 72h; file Suspicious Transaction Report within 24h per SEBI guidelines.
