Alert Details

Alert ID	TRD-20260607-MKC-0001
Pattern	MARKING CLOSE
Trader	T-0017
Instrument	MSFT
Severity	MEDIUM
Anomaly	+10.0σ vs 30-day baseline
Detected At	2026-06-06 19:02:33 UTC

AI Triage Verdict (Claude)

Verdict	ESCALATE
Confidence	82%
False Positive Probability	14%
API Call Cost	mock / cached

Rationale

Trader T-5599 dominated 71% of AAPL close-window volume with 8 sequential aggressive BUY executions, driving price +0.55% in the final 5 minutes of trading. As a prop_desk account with no market-maker registration and no index-fund mandate, there is no legitimate reason to concentrate execution at close. The close_volume_fraction is +10σ vs market-wide baseline, and the sequential BUY-only pattern is inconsistent with passive rebalancing.

Key Factors

- close_fraction 71% vs market baseline 10% (+10σ)
- price drift +0.55% in 5-minute CLOSE window
- 8 sequential aggressive MARKET BUY orders — no interleaved sells
- prop_desk account: no market-maker or index-fund exemption applicable

Recommended Action

Escalate to L2 surveillance; examine AAPL derivatives/options positions for T-5599; file STR within 24 h; flag for month-end and quarter-end recurrence monitoring.
